EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Donald Tomkins (Reg. No. 48,206) on 28 September 2007.
3. The application has been amended as follows: Added language is underlined and deleted language is indicated with double brackets.
 - a. Claim 1:
 - i. A programmable, single-chip embedded processor comprising:
 - (1) A multiple-bit, multithreaded processor core comprising a single processor pipeline have a 'k' number of pipeline stages shared by one or more independent processor threads, the number 'k' being equal to at least four, and ~~[[the]]~~a number 'n' of said processor threads being equal to or less than 'k';
 - (2) ...
 - (3) A memory capable of storing data comprising instructions from said instruction set, said memory being internally integral to the embedded processor and comprising a main RAM and a boot ROM; and

- (4) A peripheral adaptor internally integral to the embedded processor and engaged with said processor core for transmitting input/output signals to and from said processor core;
- (5) ...

b. Claims 2-20:

- i. ~~[[An]]~~The embedded processor as recited in...

REASONS FOR ALLOWANCE

4. The following is an examiner's statement of reasons for allowance: Applicants have amended the claims to add the limitations "a first selected program thread is adapted to wait for a specified number of clock cycles for a response from a designated peripheral device; and a second selected program thread is adapted to re-initialize said first selected program thread if the designate peripheral device does not respond within the specified number of clock cycles."

While the prior art searched does teach a thread waiting a specified number of clock cycles for response from a designated peripheral device, it does not teach a second program thread to re-initialize the waiting program thread when the specified number of clock cycles has been passed. The prior art searched and found has taught either the waiting thread switches to another thread or the waiting thread re-starts the waiting period. The prior art does not teach a separate second thread re-starting the waiting thread from the beginning with the beginning values, as is claimed by the language "a second selected program thread is adapted to re-initialize said first selected program thread".

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
